                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently consists of 5 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                            arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (bases

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              874 tctgtaattgatagtgttactaaaaagaggcagctcaaagacataccagttcaacaaata 933
                                                                                                                                                                                                                                          Clone requests: clonerequest@sanger.ac.uk
On Jul 1, 1998 this sequence version replaced gi:3250834.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above. This sequence is the
entire insert of clone 425C14. This sequence has been finished
according to sequence map criteria as follows. An attempt is made
to resolve all sequenceing problems, such as compressions and
repeats, but not necessarily within known annotated human repeat
sequence elements (e.g. Alu). Where the sequence is ambiguous,
there is an annotation using the 'unsure' feature key.
This sequence was generated from part of bacterial clone contigs of
human chromosome 6, constructed by the Sanger Centre Chromosome 6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cacatggaaaaaatttctatttgtgaaatagataagagtactggagctctaaatgtgctg 813

Human; mouse; spastin; ARSACS; chromosome 13q11; identification; ب (first 99US-0160588 Location/Qualifiers 77..6604 /\*tag= a /product= "mutated spastin" DNA; entry) 12792 ВP

```
cc gene therapy and as a spastin polypeptide agonists. (1), their fragments cor their complements can be useful for assaying the presence of a nucleic carid molecule in a sample. (1) is useful for diagnosing or aiding in the cc diagnosis of an early onset neurodegenerative disease in an individual. Cf the neurodegenerative disease reduced sensory nerve conduction, reduced motor nerve velocity, hypermyelination of retinal nerve fibres, ct atrophy of upper cerebellar vermis, absence of Purkinje cells and cannormal neuronal lipid storage. (1) can also be used to produce antisense nucleic acids, is useful as molecular weight or chromosome can arkers, to identify genetic disorders, as hybridisation probes or curies an antigen, identify and express recombinant protein for canalysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from the present invention can be used to identify subjects having or at risk of developing a disorder associated with aberrant expression cr activity of (1). The assays can be utilised to identify a subject or notein or spatin can easien or activity the present contacts of the present protein or activity of the present protein or activity of the present protein protein or activity of the present protein the protein or activity of the present protein or activity of the present protein or activity of the present protein the protein or activity of the present protein or activity of the present protein the protein or activity of the present protein or activity the protein to contact protein the protein or activity of the present protein or activity of the present protein or activity of the protein the protein to the protein or activity of the protein the protein the protein or activity of the protein the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Ma

The present invention describes human and mouse spastin, and mutated CC (ARSACS)) gene sequences (I). The spastin gene has been mapped to CC chromosome 13q11. (I) have neuroprotective activities and can be used in GC gene therapy and as a spastin polypeptide agonists. (I), their fragments CC or their complements can be useful for assaying the presence of a nucleic correct of an early onset neurodegenerative disease in an individual. CC The neurodegenerative disease comprises reduced sensory nerve conduction, cc reduced motor nerve velocity, hypermyelination of retinal nerve fibres, atrophy of upper cerebellar vermis, absence of Purkinje cells and CC abnormal neuronal lipid storage. (I) can also be used to produce antisense nucleic acids, is useful as molecular weight or chromosome CC markers, to identify genetic disorders, as hybridisation probes or CC analysis, characterisation or therapeutic use, or as markers for tissues CC in which the corresponding protein is expressed. Diagnostic methods from the present invention can be used to identify subjects having or at risk of developing a disease or disorder associated with aberrant expression crecion or spastin gene expression or activity. The present sequence encodes human spastin as given in the present invention.

(C (ARSACS)) gene sequences (I). The spastin gene has been mapped to C chromosome 13q11. (I) have neuroprotective activities and can be used in C gene therapy and as a spastin polypeptide agonists. (I), their fragments C or their complements can be useful for assaying the presence of a nucleic acid molecule in a sample. (I) is useful for diagnosing or aiding in the C diagnosis of an early onset neurodegenerative disease in an individual. C reduced motor nerve velocity, hypermyelination of retinal nerve fibres, catrophy of upper cerebellar vermis, absence of purkinje cells and C abnormal neuronal lipid storage. (I) can also be used to produce C antisense nucleic acids, is useful as molecular weight or chromosome C markers, to identify genetic disorders, as hybridisation probes or C primers, as an antigen, identify and express recombinant protein for analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from C the present invention can be used to identify subjects having or at risk of developing a disease or disorder associated with abarrant expression or arctivity of (I). The assays can be utilised to identify a subject having or at risk of developing a disorder associated with Spastin
                                                                                 protein or spastin gene expression or activity. The present sequence represents a mutated human spastin gene from the present invention. N.B. The present sequence is not given in the present secilication is derived from the human spastin nucleotide sequence (AAH20174) as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay (ARSACS)) gene sequences (I). The spastin gene has been manned to

CC human spastin (autosomal recessive spastic staxia of Charlevolx. Sadyenay CC (ARSACS)) gene sequences (I). The spastin gene has been mapped to CC chromosome 13q11. (I) have neuroprotective activities and can be used in CC gene therapy and as a spastin polypeptide agonists. (I), their fragments CC or their complements can be useful for assaying the presence of a nucleic CC acid molecule in a sample. (I) is useful for diagnosing or aiding in the CC diagnosis of an early onset neurodegenerative disease in an individual. (CC The neurodegenerative disease reduced sensory nerve conduction, CC reduced motor nerve velocity, hypermyelination of retinal nerve fibres, CC atrophy of upper cerebellar vermis, absence of Purkinje cells and CC antisense nucleic acids, is useful as molecular weight or chromosome CC markers, to identify genetic disorders, as hybridisation probes or CC markers, to identify genetic disorders, as hybridisation probes or CC markers, to identify genetic disorders, as hybridisation protein for CC markers, to identify genetic use, or as markers for tissues in which the corresponding protein is expressed. Disgnostic methods from CC the present invention can be used to identify subjects having or at risk of developing a disease or disorder associated with aberrant expression or spastin gene expression or activity. The present sequence encodes a mutated human spastin
                           N.B. The present sequence is derived from the human stated on page 14.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (UYMC-)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        뮍
The present invention describes human and mouse spastin, and mutated human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay (ARSACS)) gene sequences (I). The spastin gene has been mapped to chromosome 13q11. (I) have neuroprotective activities and can be used in gene therapy and as a spastin polypeptide agonists. (I), their fragments or their complements can be useful for assaying the presence of a nucleic acid molecule in a sample. (I) is useful for diagnosing or aiding in the diagnosis of an early onset neurodegenerative disease in an individual. The neurodegenerative disease comprises reduced sensory nerve conduction, reduced motor nerve velocity, hypermyelination of retinal nerve fibres, atrophy of upper cerebellar vermis, absence of purking cells and abnormal neuronal lipid storage. (I) can also be used to produce antisense nucleic acids, is useful as molecular weight or chromosome markers, to identify genetic disorders, as hybridisation probes or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; mouse; spastin; ARSACS; chromosome 13q11; identification; autosomal recessive spastic ataxia of Charlevoix-Saguenay; mutation; neurodegenerative disease; reduced sensory nerve conduction; diagnost reduced motor nerve velocity; hypermyelination of retinal nerve fibre atrophy of upper cerebellar vermis; absence of Purkinje cell; abnormal neuronal lipid storage; genetic disorder; characterisation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        6680

Diagnostic methods from the present invention can be used to identify subjects having or at risk of developing a disease or disorder associated with aberrant expression or activity of (I). The assays can be utilised to identify a subject having or at risk of developing a disorder associated with Spastin protein or spastin gene expression or activity. The present sequence encodes a mutated human spastin.

N.B. The present sequence is not given in the present specification but is derived from the human spastin nucleotide sequence (AAH20174) as stated on page 14.

                                                                                                                                                                                                                                                                                                                                                                 ρ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC (ARSACS)) gene sequences (1). The spastin gene has been mapped to CC chromosome 13q11. (I) have neuroprotective activities and can be used in CC gene therapy and as a spastin polypeptide agonists. (I), their fragments CC or their complements can be useful for assaying the presence of a nucleic CC acid molecule in a sample. (I) is useful for diagnosing or aiding in the CC diagnosis of an early onset neurodegenerative disease in an individual. CC The neurodegenerative disease comprises reduced sensory nerve conduction, CC reduced motor nerve velocity, hypermyellnation of retinal nerve fibres, CC atrophy of upper cerebellar vermis, absence of Purkinje cells and CC abnormal neuronal lipid storage. (I) can also be used to produce CC antisense nucleic acids, is useful as molecular weight or chromosome CC markers, to identify genetic disorders, as hybridisation probes or CC primers, as an antigen, identify and express recombinant protein for CC primers, as an antigen, identify and express recombinant protein for CC in which the corresponding protein is expressed. Diagnostic methods from CC the present invention can be used to identify a subject shaving or at risk of developing a disorder associated with aberrant expression CC or activity of (I). The assays can be utilised to identify subject having or at risk of developing a disorder associated with Spastin CC protein or spastin gene expression or activity. The present sequence cc encodes mouse spastin as quiven in the present invention.

                                                                                                                                                                                                                                    The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

                                                                                                                                                                                                                                                                                                                                                                                     measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.

The probes may be used for predicting, measuring and displaying gene expression in samples derifrom the human heart via microarrays. By measuring gene expression, probes are useful for predicting, disgnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular seg. cardiovascular disease, hypertension, cardiac arrhythmias and

They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancer such as lymphoma, leukaemia and myeloma. The present sequence is one of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Penn
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      27-SEP-2000;

                                                                                                                                                                                                                                                                                                                                                                                        1361
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      of diseases of the cervix, notably cervical cancer.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human HeLa cells. The SENPs, can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Penn

The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are use for antenatal diagnosis of human genetic disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ω
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic cotivity, and can be used in gene therapy and vaccine production. (I) cy proteins and polynucleotides may be used in the prevention, diagnosis and cample, they may be used to treat disorders associated with inappropriate (I) expression. For cy example, they may be used to treat disorders associated with decreased cy expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to cy olynucleotides may be used to produce the secreted (I), by inserting cy ortein. (I) proteins and polynucleotides may be used to produce the secreted (I), by inserting cy ortein. (I) proteins and polynucleotides may be used to provent. (I) cancers and treat immune/haematopoietic acity express the cy ortein. (I) proteins and polynucleotides may be used to prevent. (I) cancers and cancer metastases of haematopoietic acity express the cy ortein. (I) proteins and polynucleotides may be used to prevent. (I) cancers and cancer metastases of haematopoietic acity expression. AAK64703 corepresent thuman immune/haematopoietic antigen genomic cy represent sequences used in the exemplification of the present invention. AAK54942 to AAK64950 and AAM82169 crepresent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAK73076/c
